

# Abstract

Drugs, in particular, pyrazole derivatives represented by the following general formula (I) which have a calcium release-dependent calcium channel inhibitory effect and medicinal compositions, in particular, calcium release-dependent calcium channel inhibitors containing the above compounds as the active ingredient,

(in the formula, each symbol has the following meaning:

B: phenylene, a nitrogen-containing, divalent, saturated ring group, or a monocyclic, divalent heteroaromatic ring group which may be substituted with Alk,

X:  $\text{-NR}^1\text{-CR}^2\text{R}^3\text{-}$ ,  $\text{-CR}^2\text{R}^3\text{-NR}^1\text{-}$ ,  $\text{-NR}^1\text{-SO}_2\text{-}$ ,  $\text{-SO}_2\text{-NR}^1\text{-}$  or  $\text{-CR}^4\text{=CR}^5\text{-}$ , and

A: benzene ring which may have one or more substituents; mono-, di- or tricyclic fused heteroaryl which may have one or more substituents; cycloalkyl which may have one or more substituents; a nitrogen-containing, saturated ring group which may have one or more substituents; lower alkenyl which may have one or more substituents; lower alkynyl which may have one or more substituents; or Alk (which may have one or more substituents).
